DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (e) the invention was described in-
- (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effect under this subsection of a national application published under section 122(b) only if the international application designating the United States was published under Article 21(2)(a) of such treaty in the English language; or
- (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that a patent shall not be deemed filed in the United States for the purposes of this subsection based on the filing of an international application filed under the treaty defined in section 351(a).

Claims 1 and 2 are rejected under 35 U.S.C. 102(e) as being anticipated by US 6,303,408 (hereafter Smith)

Smith discloses, referring to figures 1-3, an electronic component (30) including on electrodes (32, 36), plurality of connection materials (22, 52) connected to another electronic component (24, 48) said connection materials including a composite connection material (22) formed of a core (40) and a conductor (42) covering said core, said core having a low modulus of elasticity at room temperature smaller that a modulus of elasticity of said conductor at room temperature (see col. 5, lines 40-65), and a single-layer connection material formed of a conductor (52, see col. 8, lines 35-40) [claim 1], wherein said composite connection material is placed on an electrode among electrodes arranged in an electrode region of said electronic component, said electrode being located in an area where a relatively greater stress is likely to be exerted that a stress exerted on another area of the electrode region, and said single layer connection

Application/Control Number: 10/040,804

Art Unit: 2827

material is placed on an electrode in said another area (see col. 8, lines 45-50) [claim 2].

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

Claims 3-5 are rejected under 35 U.S.C. 103(a) as being unpatentable over Smith.

Regarding claim 3, Smith discloses the claimed invention as described above with respect to claim 1, except Smith does not specifically state that the composite connection material is placed on an electrode in a corner area and the single layer material is placed on an electrode in an area other than said corner area. However, it would have been obvious, to one having ordinary skill in the art, at the time of invention,

Application/Control Number: 10/040,804

Art Unit: 2827

to rearrange the invention of Smith to this configuration as simple design choice. Moreover, it has been held that more than a mere change of form is necessary for patentability. *Span-Deck, Inc v. Fab-Con, Inc.* (CA 8, 1982) 215 USPQ 835.

Regarding claims 4 and 5, although Smith does not specifically state that the ratio in number of said composite connection material to all connection materials is from 10% to 90%, it would have been obvious, to one having ordinary skill in the art, at the time of invention, to provide a ratio within this range, since the fragmentary figure of Smith displays a ratio of 60% and can thus be used as prior art (see MPEP 2125). Moreover, it has been held that where the general conditions of a claim are disclosed in the prior art, discovering the optimum or workable ranges involves only routine skill in the art. *In re Aller*, 105 USPQ 233.

Response to Arguments

Applicant's arguments with respect to claims 1-5 have been considered but are moot in view of the new ground(s) of rejection.

Allowable Subject Matter

Claims 6-9 are allowed.

Conclusion

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

Page 5

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
